## Important information

**Please check the construction set for completeness using the position list in good time before starting construction or commissioning your construction team.** If individual parts are defective or missing, we will deliver these as quickly as possible. However, we cannot refund the costs for any resulting construction delays to a construction company.

**Please understand that we cannot assume any guarantee for the following defects:**

- incorrect storage before assembly
- incorrect anchoring with the ground or inadequate foundation (foundation according to statics)
- damage due to erection errors, e. g. the house is not level or not right-angled
- damage through a higher level of snow burden than statically envisaged. Recommendation: load relief of the roof by removing the snow layer
- storm damage (insurance cases) or violent destruction
- damage through any alteration to the design by the client
- natural formation of cracks, branch holes, twisting, decolouration or similar modification (natural process; has no influence on the statics)

**Storage information until construction:**

- store pallet on a level and dry surface.
- Protect from exposure to sunlight and the influences of weather; wood can warp drastically in a loose condition!

**Maintenance tips:**

The wood is untreated. Accordingly, regular, protective coating is absolutely necessary! Please observe the attached information sheet "Care instructions/Colour treatment".

## General tips and refers to:

- 1 - The packaging foil **can be used** to keep moisture out of the house. It is laid according to the ground area of the house under the main bearing (not in delivery).

-  1 - **Foundation according to the structural calculations** (not included in the scope of delivery): concrete C25/30, each 2 Ø 12 top and bottom, brace mat R188A (alternatively brace Ø 6/20cm). Anchoring of the floor beams **(in the building)** on the strip foundation using bolts M12,  $e \leq 60\text{cm}$ . The base bearings in the storeroom of the house must be entirely flush.

-  2 - **It is necessary to lay a tarpaper or equal on the roofboards.**

-  3 - Please note, that the screw with the washer has **to fasten on the top of the longholes in the strip for connecting the planks together**. It is important, that the screws **can move a little bit** and the roof doesn't come into contact with these connecting strips; **otherwise you have to cut these strips on the bottom. Please don't screw too tight.**
