

4. Locate the assembly on the desired location with the flexible tails through the prepared hole and whilst holding the flange, secure the standpipe

Note: If mounting into wooden floor, secure standpipe using screws only (wall plugs are not required.) If mounting into solid floor, drill suitable sized holes for wall plugs first, then insert wall plugs in floor and finally secure the standpipe using screws. Where required ensure correct plugs for your floor type are used.

5. Connect the flexible tails to water supply.

HAND SHOWER INSTALLATION

Insert a washer into each end of the shower hose and then screw it into the shower and mixer.

Note: Pull out the diverter to operate the hand shower.

Cleaning

To maintain the surface finish of your product, wipe clean regularly, using a clean damp cloth and dry cloth to polish. Do not use abrasive cleaning agents or materials on the product surface as you may invalidate your guarantee. Should any harsh chemicals come into contact with the surface of the product during bathroom cleaning, rinse off immediately, wipe clean and dry.

Troubleshooting

Dripping tap : Check leaking issue, remove and clean the cartridge, then replace it if needed.

Diverter not diverting: Remove the diverter, check and clean, then replace it if needed. Could it be insufficient pressure, so pressure needs to be checked.

Poor flow: May be due to a blockage, so the water supply pipes need to be checked for blockages and or kinks.

Have the isolation valves been opened fully.

No flow: May be due to a blockage, so the water supply pipes need to be checked for blockages and or kinks.

Have the isolation valves been opened fully

Mixer moving when installed: check bottom fixing is fully secured

USER MANUAL

Thank you for choosing Better Bathrooms.
Please read this manual before installing your product
and keep for future reference.

Tools required

Spanner Screwdriver Allen Key Drill and Hammer

Installation

Please note: Before starting the installation of a new mixer, turn off the water supply

Please note: HOT supply to the left and COLD supply to the right

Please ensure to flush the system prior to installation" and "Always check for pipes and cables before any drilling is carried out.

The water supply should be turned on after installation and the assembly checked for leaks"

1. At desired location drill a hole in the floor (min diameter: 57mm, max diameter 65mm)

2. Place flange over the standpipe and then place it to the cover plate

3. The installer needs to fit the threaded ring and fixing bracket to the stand pipe with screws. To check whether it is tight enough.

The threaded ring and fixing ring, should be fitted to the stand pipe thread and tightened, once secured, tighten the grub screws fitted in both using an allen key to further secure
