

Getting a new sofa is very exciting.
We want your experience to be as smooth as possible,
so we've put together this handy guide for measuring up.

Step 1 – Unpackaged & packaged dimensions

You can find both sets of measurements in the technical specifications of your chosen sofa online. L-shaped and corner sofas come in several boxes, so there'll be more than one set of package dimensions. You'll need to refer to these while measuring.

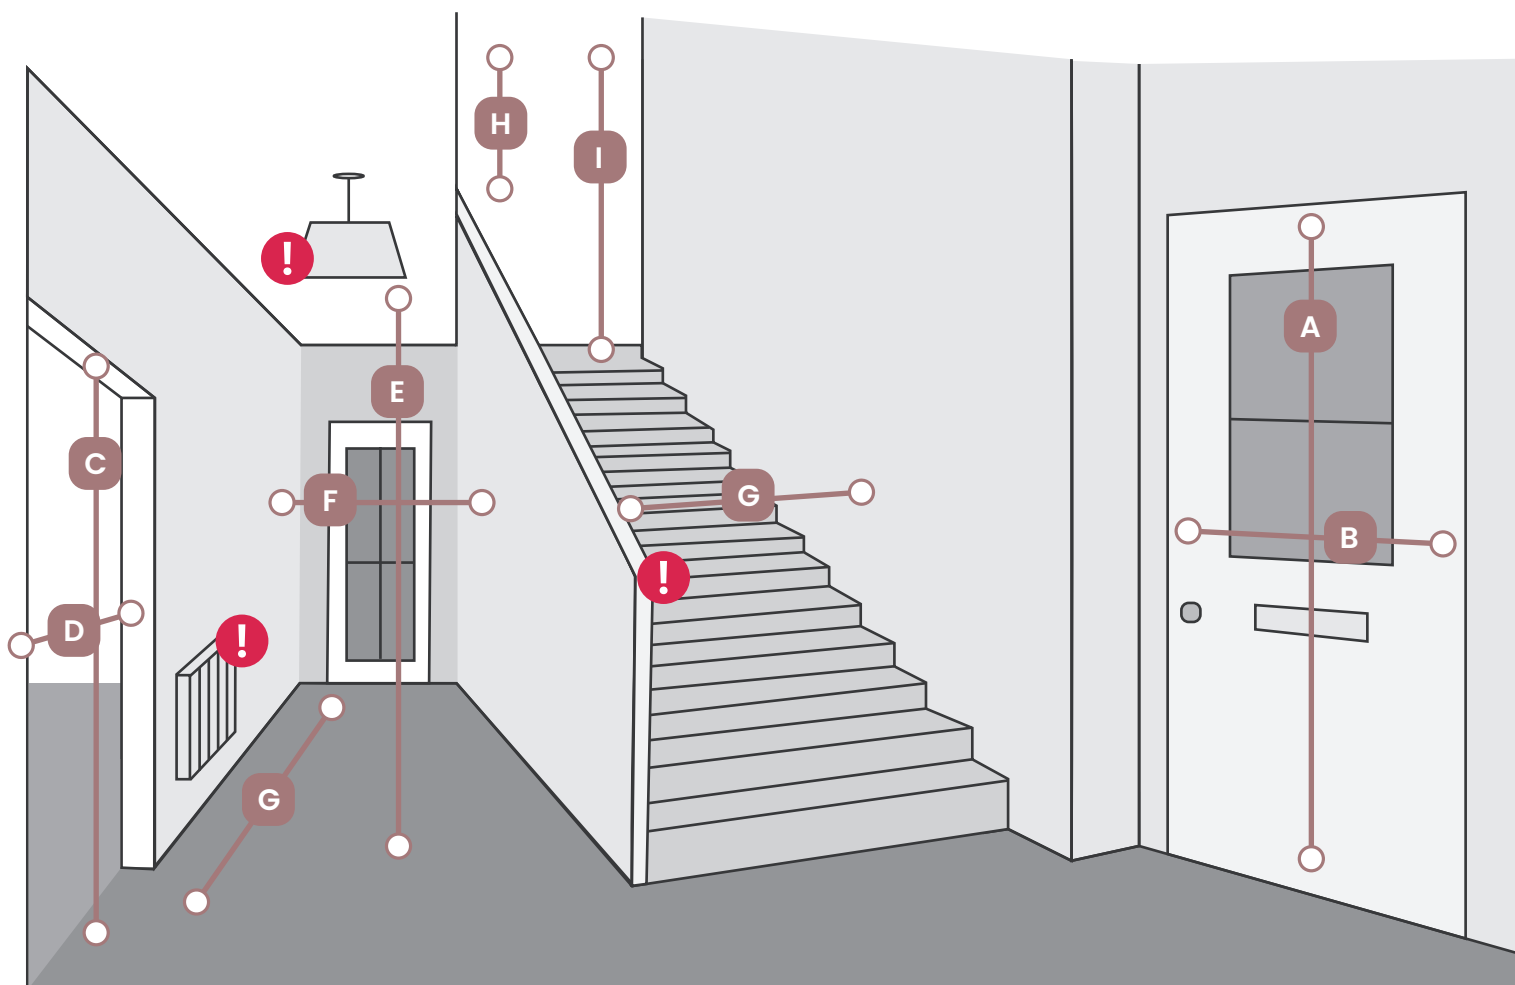

Step 2 – Your sofa's route

It's important to plan the sofa's route to your chosen room and remove any items that could get in the way, i.e. pictures on walls, side tables, low lampshades, etc.

Start by measuring the narrower spaces and check them against the packaged measurements of your new sofa, and if you need to rotate your box or boxes, make sure of the following–

1. Your ceiling height is greater than the width of the box.
2. The depth or height of the box is less than the width of the area.

Step 3 – My key measurements

When measuring, consider fixtures such as radiators, shelves, bannisters and handrails, and take into account your light fittings to avoid any damage.

Doorways

A External door frame height	
B External door frame width	
C Internal door frame height	
D Internal door frame width	

Stairs

G Width at narrowest point	
H Distance between top of bannister & ceiling	
I Floor-to-ceiling height on tight corners or landings	

Hallways

E Ceiling height at narrowest point	
F Width at narrowest point	

Lifts

Open-door width	
Open-door height	
Internal Depth	

Not in a hurry? You can choose a delivery date that suits you up to 10 weeks from ordering.
